

1     **ABSTRACT**

2             In accordance with certain aspects of the intelligent message deletion, a  
3     system includes a message queue and an intelligent deletion module. The  
4     intelligent message deletion module adds a newly received message to the  
5     message queue and deletes a previously received message from the message queue  
6     based at least in part on a sender of the newly received message.
